## Abstract

This document provides the instructions on formatting the TAR project paper in  $\text{\LaTeX}$ . This is where you write the abstract (i.e., summary) of the work you carried out. The abstract is a paragraph of text ranging between 70 and 150 words.

## 1. Introduction

This section is the introduction to your paper. Introduction should not be too elaborate, that is what other sections are for (the Introduction should definitely not spill over to second page).

This is the second paragraph of the introduction. Paragraphs are in  $\text{\LaTeX}$  separated by inserting an empty line in between them. Avoid very large paragraphs (larger than half of the page height) but also avoid tiny paragraphs (e.g., one-sentence paragraphs).

## 2. Second section

This is the second section. In scientific papers this is usually (but not necessarily) the section in which related research is (briefly) described.

### 2.1. First subsection

This is a subsection of the second section.

### 2.2. Second subsection

This is the second subsection of the second section. Referencing the (sub)sections in text is performed as follows: “in Section 2.1. we have shown ...”.

#### 2.2.1. Sub-subsection example

This is a sub-subsection. If possible, it is better to avoid sub-subsections.

## 3. Extent of the paper

The paper should have at least. The paper should have a minimum of 3 and a maximum of 5 pages plus an additional page for references.

## 4. Figures and tables

### 4.1. Figures

Here is an example on how to include figures in the paper. Figures are included in  $\text{\LaTeX}$ code immediately *after* the text in which these figures are referenced. Allow  $\text{\LaTeX}$  to place the figure where it believes is best (usually on top of the page or at the position where you would not place the figure). Figures are referenced as follows: “Figure 1 shows ...”. Use tilde (~) to prevent separation between the word “Figure” and its enumeration.

Figure 1: This is the figure caption. Full sentences should be followed with a dot. The caption should be placed *below* the figure. Caption should be short; details should be explained in the text.

Table 1: This is the caption of the table. Table captions should be placed *above* the table.

Heading1	Heading2
One	First row text
Two	Second row text
Three	Third row text
	Fourth row text

### 4.2. Tables

There are two types of tables: narrow tables that fit into one column and a wide table that spreads over both columns.

#### 4.2.1. Narrow tables

An example of the narrow table is the Table 1. Do not use vertical lines in tables – vertical tables have no effect and they make tables visually less attractive.

### 4.3. Wide tables

Table 2 is an example of a wide table that spreads across both columns. The same can be done for wide figures that should spread across the whole width of the page.

## 5. Math expressions and formulas

Math expressions and formulas that appear within the sentence should be written inside the so-called *inline* math environment:  $2 + 3$ ,  $\sqrt{16}$ ,  $h(x) = \mathbf{1}(\theta_1 x_1 + \theta_0 > 0)$ . Larger expressions and formulas (e.g., equations) should be written in the so-called *displayed* math environment:

Table 2: Wide-table caption

Heading1	Heading2	Heading3
A	A very long text, longer than the width of a single column	128
B	A very long text, longer than the width of a single column	3123
C	A very long text, longer than the width of a single column	−32

$$b_k^{(i)} = \begin{cases} 1 & \text{ako } k = \operatorname{argmin}_j \|\mathbf{x}^{(i)} - \mu_j\| \\ 0 & \text{inače} \end{cases}$$

Math expressions which you reference in the text should be written inside the *equation* environment:

$$J = \sum_{i=1}^N \sum_{k=1}^K b_k^{(i)} \|\mathbf{x}^{(i)} - \mu_k\|^2 \quad (1)$$

Now you can reference equation (1). If the paragraph continues right after the formula

$$f(x) = x^2 + \varepsilon \quad (2)$$

like this one does, then use the command *noindent* after the equation to prevent the indentation of the row starting the paragraph.

Multiletter words in the math environment should be written inside the command *mathit*, otherwise L<sup>A</sup>T<sub>E</sub>X will insert spacing between the letters to denote the multiplication of values denoted by symbols. For example, compare *Consistent*(*h*, *D*) and *Consistent*(*h*, *D*).

If you need a math symbol, but you don't know the command for it in L<sup>A</sup>T<sub>E</sub>X, try *Detexify*.<sup>1</sup>

## 6. Referencing literature

References to other publications should be written in brackets with the last name of the first author and the year of publication, e.g., (Chomsky, 1973). Multiple references are written in sequence, one after another, separated by semicolon and without whitespaces in between, e.g., (Chomsky, 1973; Chave, 1964; Feigl, 1958). References are typically written at the end of the sentence and necessarily before the sentence punctuation.

If the publication is authored by more than author, only the name of the first author is written, after which abbreviation *et al.*, meaning *et alia*, i.e., and others is written as in (Johnson et al., 1976). If the publication is authored by only two authors, then the last names of both authors are written (Johnson and Howells, 1974).

If the name of the author is incorporated into the text of the sentence, it should be out of the brackets (only the year should be in the brackets). E.g., “Chomsky (1973) suggested that ...”. The difference is whether you reference the publication or the author who wrote it.

The list of all literature references is given alphabetically at the end of the paper. The form of the reference

depends on the type of the bibliographic unit: conference papers, (Chave, 1964), books (Butcher, 1981), journal articles (Howells, 1951), doctoral dissertations (Croft, 1978) and book chapters (Feigl, 1958).

All of this is produced for you automatically by using BibTeX. Sve ovo dobivate automatski ako. In the file `tar2014.bib` insert the BibTeX entries, and then reference them via their symbolic names.

## 7. Conclusion

Conclusion is the last enumerated section of the paper. Conclusion should not exceed half of the column and is typically be split into 2–3 paragraphs.

## Acknowledgements

If suited, before inserting the literature references you can include the Acknowledgements section in order to thank those who helped you in any way to deliver the paper, but are not co-authors of the paper.
